

## **MultiTaction Announces Final Production Notice for the MT556XNB 6<sup>th</sup> Generation Optical Touch Display**

Effective February 1<sup>st</sup>, 2021, MultiTaction is providing notification of final production for the MT555XNB display. This display is being replaced with the seventh generation [MT557D optical touch display, Decca](#).

Final production plans include fulfilling any prior production orders received and acknowledged by the company. Please contact your MultiTaction Sales Director to discuss the availability of the remaining stock for outstanding opportunities that you might have.

Some of you have already started selling and quoting the next generation MT557D display as an alternative. A decade of revolutionizing the interactive display experience is the foundation for the world's best interactive video walls. MultiTaction's Decca, MT557D, display gives the best user experience with superb touch responses, brightest display, and robust design.

As with our previous interactive display models, Decca, employs MultiTaction's unique ClearSight touch tracking engine, which has been upgraded to run at 120Hz and gives a smoother interaction when the display refresh rate is 60Hz. The overall result is a faster, more accurate, and more reliable touch tracking system than any other touch screen in the market. This new display has an anti-glare front glass with antimicrobial treatment.

To see the complete product details, download the Decca Spec Sheet and Datasheet from here: <https://www.multitaction.com/decca/>. Additional resources are also available on the [MultiTaction Partner Portal](#).

MultiTaction will continue to provide support all MT556XNB units covered by MultiTaction's warranty. For all displays no longer under warranty, MultiTaction makes every attempt to provide ongoing technical support and field replaceable units (FRU) for its products for at least 5 years after announcing the Final Production.
